595ADJBLR

Adjustable Barrel Bolt
Verrou cylindrique ajustable
Stainless St. / Acier inox.

595ADJSSR

Features:

- This self-adjusting barrel bolt is a new innovative product that eliminates the common issues of misaligned barrel bolts due to door shifting.
- With a selection of sizes - standard (4" to 6"), heavy duty (4" and 6") and heavy duty padlock barrel bolts (6" and 8") - the self-adjusting barrel bolt offers a quick and easy one time installation process and is functional with indoor and outdoor applications such as doors, gates and windows.

Caractéristiques :

- Ce verrou cylindrique à ajustement automatique est un produit innovateur qui élimine le problème de verrou mal aligné, causé par un désalignement de la porte.
- Offert dans une variété de formats - standard (4 po à 6 po), robuste (4 po et 6 po) et robuste avec cadenas (6 po et 8 po) – ce verrou à ajustement automatique s'installe rapidement, ne demande pas de réajustements et fonctionne aussi bien à l'intérieur qu'à l'extérieur, que ce soit sur des portes, des clôtures ou des fenêtres.

94233FBBC

Features:

- This innovative family of hinges features new 2-sided and 3-sided designs that "wrap around" the points of attachment, thus effectively transferring the forces of the swinging load to the stationary structure.
- PermAlign hinges make the overall system 90% stronger than conventional strap and tee hinges based on comparative independent testing.
- These hinges instantly and permanently align themselves with the points of attachment in the lumber allowing for quick and easy installation.

Caractéristiques :

- Cette famille novatrice de pentures comprend de nouveaux modèles à 2 ou 3 faces qui enveloppent les points de fixation de manière à transférer la force de mouvement de la section pivotante vers la structure fixe.
- Des essais indépendants révèlent que le système PermAlign est 90 % plus fort que les systèmes à charnières et pentures en T traditionnels.
- Ces pentures s'installent aisément et rapidement puisqu'elles s'ajustent instantanément aux points de fixation des matériaux.

LINCH PINS**GOUPILLES À ANNEAU**

Linch Pin
Goupille à anneau
Yellow Zinc / Zinc jaune

3621YZBC

**Features:**

- Self-locking pins inserted in the end of a shaft, as in an axle, to prevent a wheel from slipping off.
- Easy to insert and remove for quick disconnect applications.
- Used in various tractors joints and other automotive components.
- Suitable for indoor or outdoor use.
- Durable and lightweight.

Caractéristiques :

- Goupille autoverrouillante à insérer dans l'extrémité d'une tige, comme un essieu, par exemple, pour empêcher la roue de glisser.
- S'insère et se retire facilement, pratique pour les applications exigeant un raccord rapide.
- Compatible avec différents arbres de tracteurs et autres pièces automobiles.
- S'utilise à l'intérieur et à l'extérieur.
- Durable et léger.

GREASE FITTINGS**RACCORDS GRAISSEURS**

Grease Fitting - Drive Type
Raccord graisseur - Fileté
Zinc

31601XBC

Grease Fitting - SAE
Raccord graisseur - SAE
Zinc

31822XR

Grease Fitting - Metric
Raccord graisseur - Métrique
Zinc

31721XR

**Features:**

- SAE, drive and metric type fittings in various sizes and configurations.
- Designed to meet the demanding requirements of most automotive, agricultural, industrial, marine, truck, federal and construction equipment needs.
- Ball check in the head prevents dirt and grit from getting into the fitting.

Caractéristiques :

- SAE, embouts et raccords de types métriques dans plusieurs formats et configurations.
- Conçus pour répondre aux exigences élevées des industries de l'automobile, de l'agriculture, maritime, industrielle, du camionnage, du fédéral et de l'équipement destiné à la construction.
- Une bille anti-retour, située dans la tête, empêche la saleté et la poussière de s'infiltrer dans le raccord.

HITCHING RINGS

ANNEAUX D'ATTELAGE

Hitching Ring and Plate
Anneau d'attelage avec plaque
Zinc

2178XB

Features:

- Zinc plating offers corrosion resistance for all of your functional hardware needs.
- Provides maximum protection against corrosion and rust.
- Safe working load 400 lbs.
- Design for animal tie downs and other home and farm applications.
- Ideal for general rope tie down applications and for bolt and spring snap uses.
- Hitching rings swivel 180-degrees when mounted, which provides versatility and ease of use.
- Four holes for fasteners.
- Rugged steel construction.
- Do not use to hang loads, lift loads, support weight of persons or objects, and do not use on athletic or playground equipment.

Caractéristiques :

- Son placage en zinc offre une résistance à la corrosion pour tous vos besoins en quincaillerie fonctionnelle.
- Protection maximum contre la rouille et la corrosion.
- Capacité de charge sécuritaire : 180 kg (400 lb).
- Conçu pour attacher les animaux et pour d'autres applications domestiques ou agricoles.
- Idéal pour toute application générale de nouage avec une corde, et pour les fermetures à targette ou à ressort.
- Une fois installé, l'anneau d'attelage pivote sur 180 ° pour accroître sa polyvalence et sa facilité d'utilisation.
- Quatre trous pour fixation.
- Construction en acier robuste.
- Ne pas utiliser pour suspendre ou soulever des charges, pour soutenir le poids d'une personne ou d'un objet, et ne pas utiliser pour de l'équipement sportif ou de terrain de jeu.

STAINLESS

INOX.

GENERAL INFORMATION ON STAINLESS STEEL WOOD SCREWS

A high-end product with a glossy finish, stainless steel offers a good resistance to corrosion. However, this type of steel is much more fragile than that found in regular wood screws. It is therefore recommended to handle them with a certain care during installation. Here are some tips to minimize problems:

- Set your electric drill or screwdriver to a reduced speed.
- Pre-drilling a pilot hole will make installation easier.
- #8 screw: use a 3/32" drill bit
- #10 screw: use a 5/32" drill bit
- Lubricate screws with dish soap or any other water-based lubricant.

RENSEIGNEMENT GÉNÉRAUX SUR LES VIS EN ACIER INOXYDABLE

Produit haut de gamme au fini lustré, l'acier inoxydable résiste à la corrosion. Les vis en acier inoxydable sont cependant plus fragiles que les vis à bois régulières. Il est donc recommandé de les utiliser avec délicatesse lors de l'installation et de :

- Régler votre perceuse ou tournevis électrique à vitesse réduite.
- Un pré-perçage facilitera la pénétration
- Vis # 8 : utiliser une mèche de 3/32"
- Vis # 10 : utiliser une mèche de 5/32"
- Lubrifier la vis avec du savon à vaisselle

ANCHORS ANCRAGES

Wedge anchors work by inserting them into a hole drilled into concrete. The concrete wedge anchor is then expanded, wedging itself securely in the concrete. Wedge anchors are designed for heavy duty applications.

Sleeve anchors' design allows them to anchor into concrete, brick and block. They work by inserting them into a hole drilled into concrete. Turning the nut pulls the working end of the sleeve anchor up through the sleeve, expanding and anchoring itself securely. Sleeve anchors are designed for heavy duty applications.

Lag shields are designed for anchoring lumber into concrete, brick and block. Lag screws are used to expand the lag shield anchor against the concrete, brick or block.

Hammer-in anchors are designed for anchoring into concrete, brick or block. You simply need to insert the anchor into a pre-drilled hole in concrete, and set the anchor by driving the nail into the anchor. The nail creates the expansion of the anchor.

Lead shield anchors are designed for anchoring lumber into concrete, brick and block. Regular screws are used to expand the anchor against the concrete, brick or block.

On insère les **cales d'ancrage** dans un trou préalablement percé dans le béton. Elles se logent ensuite bien en place au fur et à mesure qu'elles prennent de l'expansion. Elles sont conçues pour les applications de haute intensité.

Les **douilles d'ancrage** sont conçues pour s'ancrer dans le béton ou la brique. On les insère dans un trou pré-percé et on tourne leur écrou, ce qui leur fait prendre de l'expansion et leur permet de s'ancrer fermement. Elles sont conçues pour les applications de haute intensité.

On se sert des **ancrages à cheville pour tire-fond** pour ancrer une pièce de bois dans le béton ou la brique. On utilise une vis tire-fond pour actionner ce type d'ancrage.

Les **clous d'ancrage** peuvent être utilisés dans le béton ou la brique. Il n'y a qu'à insérer l'ancrage dans un trou préalablement percé. Il se déclenchera lorsqu'un clou y sera introduit.

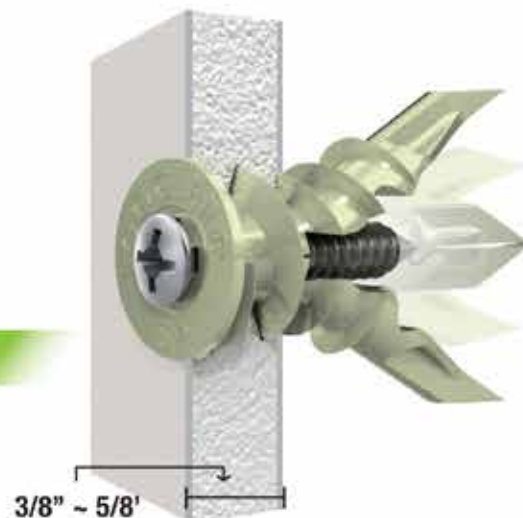

On se sert d'une **cheville d'ancrage de plomb** pour ancrer une pièce de bois dans le béton ou la brique. Une vis régulière est utilisée pour actionner ce type d'ancrage.

Ball Bearing | Roulement à billes

- One-piece outer raceway, cold-rolled, formed to a close tolerance ball groove with machined and hardened inner raceway; grease-packed.
- Chemin de roulement extérieur mono-pièce, laminé à froid et travaillé pour former une rainure à billes de tolérance précise, ainsi qu'un chemin de roulement interne usiné et trempé; lubrifié à la graisse.

Roller Bearing | Roulement à rouleaux

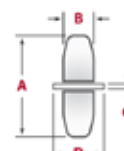

- Two-piece bearing, roller assembly and hardened outer race; persistent, simple maintenance, suitable for slower speeds.
- Palier à coquette ajusté à la presse dans jante de roue, tourne autour d'une entretoise trempée; durable, entretien simple; pour vitesse de déplacement lente.

Plain Bearing | Roulement lisse

- Hub material is the bearing, wheel rotating directly on the axle; most economical, minimal maintenance, suitable for slower speeds.
- Le matériau du moyeu constitue le palier, la roue tourne directement sur l'essieu; roulement le plus économique, entretien minimal; pour vitesse de déplacement lente.
