The Selkirk Chimney System (SCS) is ideal for venting residential heating appliances burning wood, #2 oil, and natural and LP gas. They have been specifically designed for today's modern, high-efficiency "airtight" wood stoves. They are designed for gravity (natural draft), non-positive internal pressure venting only. The SCS is usable on any appliance having a power burner (such as an oil furnace) if that appliance operates with neutral or negative draft at its outlet. Non-residential appliances which may cause positive pressure in the chimney should use a Selkirk Commercial Model PS or IPS system.

NOTE: See separate catalog for Canadian installation.

Framing / Supports:

All Selkirk Supports are designed to carry four times the combined weight of each system at maximum allowable height.

Chimney Height Above Roof

Requirement #1: The chimney must extend not less than 3ft. above the highest point at which the chimney comes in contact with the roof
 Requirement #2: The chimney must extend not less than 2ft. above the highest roof surface or structure within a horizontal distance of 10ft.

- Step 1 = Multiply the upper part from the pitch of roof by the # of feet away from the peak
- Step 2 = Add 24" to your calculation to meet requirement #2
- Step 3 = Height of chimney required to extend above the roof line

*Measurements in Grey highlights have been moved to 36" to meet requirement #1

The chimney must extend at least three feet above the highest point where it passes through the roof surface and at least two feet higher than any part of the building within a horizontal distance of ten feet.

ULTRA-TEMP/GALVA-TEMP TEES AND ELBOWS

Now includes 2 Elbows, 2 Locking Bands and 1 Interior Resupport, all in one box!

15°/30° Insulated Elbow Kits

15° Insulated Elbows can be used for fixed offsets of 15° slope or in pairs for offsets adjustable from 0° to 30° slope. The 30° Insulated Elbow in 5", 6", 7" and 8" sizes can be used for fixed offsets of 30° slope. Greater angles are prohibited by UL® Standard 103 and by the terms of the product listing.

Two 15° Elbows combine to be adjustable 0-30°

ULTRA-TEMP/GALVA-TEMP TEES AND ELBOWS

Insulated Tee

The Insulated Chimney Tee may be used to start chimneys indoors or outdoors using a Wall Support assembly or a masonry pier. A length of Insulated Chimney Pipe is attached to the Tee snout to pass safely through combustible walls. An Insulated Tee Cap is included which can be removed from bottom opening for inspection and cleanout.

ULTRA-TEMP/GALVA-TEMP SUPPORTS

Roof Support Package

An ideal support assembly for freestanding fireplaces and open cathedral ceiling installations. Fits all roof pitches and requires only simple framing. Mounts easily on to top of roof through opening that allows 2" clearance. Maximum length of chimney which can be suspended below is 20' supported. Maximum total length is 30'.

The Roof Support Package (RSP) contains one 18" length of pipe, roof brackets and necessary hardware.

The roof brackets and hardware may be purchased without the pipe section by ordering a Roof Support Kit (RSK).

The brackets may be assembled to any standard pipe length at any desired height. Locking bands must be used at each pipe joint when installing either the RSP or RSK.

NOTE: Framing dimension for the installation of the RSK is identical to the RSP dimension.

ULTRA-TEMP/GALVA-TEMP SUPPORTS

Universal Roof Support Assembly

This new design gives you the flexibility of securing the 5", 6", 7" or 8" diameter chimney with a heavy duty band. The band allows you to slide the installed length vertically to properly position this section in the system. Installation requirements are the same as our standard RSP. The URSA can hold 30' of pipe total – up to 20' can be below.

Heavy Duty Universal Roof Brace Kit

The Universal Roof Brace Kit is designed to provide extra stability for the chimney system above roof line, and is required when the chimney extends over 5 feet above the roof. One kit should be used for every 5' of chimney. Includes telescoping legs that adjust from 5'-9' and a support band that adjusts to fit chimneys from 5"-10".

Wall Support Kit – Now Supports 60 Vertical Feet at 2" from Wall.

The Type HT Wall Support Kit has been tested for use fully enclosed and has been designed in 5", 6", 7" and 8" sizes to carry up to 60' of height. The capacity of the larger sizes, 10", 12" and 14", is 40' of chimney. The Wall Support is intended for use with the Insulated Tee as an interior or exterior support where the chimney has a lateral connection. It is also useful where the pipe connection passes through a combustible interior or exterior wall. Braces may be fastened to the wall either above or below the plate for chimneys which penetrate through the wall.

Interior Resupport

Interior resupport assembly allows for two different methods of chimney resupport. The first method is used at the immediate section of chimney above the upper elbow of an offset. With the appropriate Fire Stop/Joist Shield (JS) in place, clamp the support band around chimney and attach with 6 sheet metal screws. The second means of support is used primarily when the immediate sections of the upper offset do not pass through a joist area and resupport is necessary. The Support Band is clamped around the chimney immediately below a Locking Band. In both methods, the straps are nailed to suitable framing at 2" clearance. The 18' limit of supportable chimney length applies.

Ceiling Supports

The Finish Support Package (FSP) is available with a square trim plate in 6", 7" and 8" sizes. The FSPR has a round trim plate and is available in a 6" or 8" size. The Ceiling Support (CSP) in 10" size is unpainted on the back and comes with a square trim plate only. With proper framing, all ceiling supports assure at least 2" minimum clearance to combustibles at the support level and can carry up to 50' of vertical chimney height.

Support Box / Cathedral Ceiling / Mobile Home Support

The Support Box is intended for use when installing chimney in an A-frame, in a mobile home or in a ceiling under a narrow section of roof. It provides a finished installation at the ceiling level and will support up to 20' of 6", 7" or 8" diameter chimney. The part also provides shielding from insulation when installed in an unoccupied attic space. The Support Box assembly is comprised of a black box designed for installation inside 16" O.C. joists, a cylindrical shield, support bucket, ceiling trim and four screws.

ULTRA-TEMP HT CHIMNEY KITS

Three basic Chimney Kits designed around one of the standard support systems. Select the kit that is right for your installation along with the required insulated pipe sections and you'll have what you need to complete most installations.

Flat Ceiling Support Kit (FCK)

Provides the support package and termination parts for a chimney that is supported by a flat ceiling, passes through an attic area and penetrates the roof. Just add Pipe Lengths and the Flat Ceiling Support Kit (FCK) has all necessary parts for complete installation. However, depending upon your roof design and the position of your chimney on the roof, it may be necessary to install a Roof Brace Kit to provide required support for your chimney above the roof.

An Attic Insulation Shield is a required part of the installation even if you have no insulation in the area where your chimney passes through the attic. The only exception to this AIS installation is if you install a full enclosure around the chimney in the attic area at the minimum 2" clearance.

Pitched Ceiling Support Kit (PCK)

For installation of a chimney in a cathedral or pitched ceiling such as standard A-Frame construction.

The Pitched Ceiling Support Kit provides all necessary parts for a complete installation with the exception of the required Insulated Pipe Lengths and Adjustable Flashing (AF). Selection of the Adjustable Flashing is determined by the pitch of your roof as explained on page 10.

In calculating the number of insulated Pipe Lengths your chimney run requires, note that the Roof Support Package (RSP) comes with one 18" pipe length as part of the support.

Thru-the-Wall Support Kit (TWK)

For a wall-supported chimney system with a horizontal length passing through an exterior wall, connecting to a Tee and running vertically up the exterior wall to termination above the roof line. The Thru-the-Wall Support Kit provides all necessary parts for a complete installation with the exception of required Insulated Pipe Lengths to reach your desired chimney height.

One Wall Band (WB) is included in the kit. Additional Wall Bands could be required if your vertical chimney run is more than 16' high. In the event that your vertical chimney run penetrates the roof eave, your installation could also require an Adjustable Flashing (AF) and Storm Collar (SC).

ULTRA-TEMP/GALVA-TEMP RAIN CAPS/STORM COLLAR

Round Top

Part of the chimney system roof assembly, the Round Top is designed with a dome to exclude rain and leaves, and a lower skirt to deflect wind for proper chimney draft. In the Type HT Chimney (5", 6", 7" and 8" sizes), the Round Top is designed with three legs that slide down over the outside of the chimney. A cinch band is then positioned over the legs and tightened to hold the top firmly in place. This design makes cap removal for cleaning a breeze.

In the ULTRA-TEMP and GALVA-TEMP chimney (10", 12" and 14" sizes), the Round Top is designed with a squeeze collar that fits inside the chimney pipe. The squeeze collar expands as a set screw is tightened to hold the top firmly in place.

ULTRA-TEMP/GALVA-TEMP FLASHINGS

Flashings for Various Roof Pitches

Flashings are used to seal the opening where the chimney penetrates the roof to divert rain and snow down from the roof and away from the chimney system.

A series of adjustable flashings are available depending on your roof pitch. A flat and low pitch flashing is used to seal flat and low pitch roof (up to 2/12 pitch) openings.

To determine your roof pitch, measure the number of inches from the end of a level ruler down to the roof. This is the rise for 12" of run. A rise of 5" is a 5/12 pitch. . .4", a 4/12 pitch, etc.

SUSI (Selkirk Universal Shielding Insulation)

Optional insulation for use with the Support Box, Attic Insulation Shield and Insulated Wall Thimble. The SUSI protects building materials against radiant heat from the chimney and helps maintain temperatures within the chimney system. The SUSI also stops air infiltration into the dwelling. The only insulation approved for use with the Selkirk Chimney System.

ULTRA-TEMP/GALVA-TEMP STOVE PIPE ADAPTERS

Dripless Stove Pipe Adapters

Dripless Stove Pipe Adapters are used to connect single wall stove pipe to Selkirk Chimney Systems (SCS). Dripless Stove Pipe Adapters are designed to slip inside single wall stove pipe to contain any creosote dripping down the chimney to inside the stove pipe. There are two Dripless Stove Pipe Adapters:

Dripless Stove Pipe Adapter (DSA) – For use in retrofit installations, this part can be installed from below an SCS Finish Ceiling Support and secured with screws.

Dripless Stove Pipe Adapter w/Coupler (DSAC) – For use in new installations, this part can be installed by twist-locking the coupler on the DSAC into the first section of SCS chimney.

ULTRA-TEMP/GALVA-TEMP ACCESSORIES

Wall Band

The Wall Band is used along the wall to provide for 2" clearance and assure stability. Also useful for suspending offsets. Required at 8" or closer intervals to stabilize the chimney, wherever it is supported along a vertical wall.

ULTRA-TEMP/GALVA-TEMP TYPICAL CHIMNEY INSTALLATIONS

Short or tall, large or small, there is a Selkirk Chimney System to suit every need or appliance. The following diagrams are intended as guides to proper part selection for several common chimney installations. Keep in mind that these diagrams do not show the exact details for installation of the various chimney parts. They supplement the instructions by illustrating a wider variety of complete chimney systems. While the primary emphasis in the diagrams is on solid-fuel appliances, the type of appliance originally selected must never affect the installation of the chimney.

Whether the chimney is initially connected to a gas, oil or wood-burning appliance, the parts used and clearances to combustibles are always the same. Remember that at some future time, the same chimney may serve a wood furnace, even if it started out with gas or oil.

1. Maintain the minimum 2" AIRSPACE clearance to combustibles and to any insulation except SUSI.
2. For joint security—use Locking Bands or screws for the chimney and its connector.

NOTE: The drawings shown of these installations are solely for assistance in product selection. Reference should be made to the Selkirk Chimney System installation instructions for full and exact details of a correct installation.

1. Masonry Fireplace using Selkirk Chimney

2. Basement Heater with Tee-supported outside chimney

*The end of the chimney section must extend into the room a minimum of 4-1/2" beyond the face of the wall.

3. Wood Stove with chimney offset to avoid ridge

ULTRA-TEMP/GALVA-TEMP TYPICAL CHIMNEY INSTALLATIONS

4. Solid Fuel Appliance with a short vertical chimney

5. Combination of Furnace and Water Heater on one chimney

6. Wood Heater with its chimney through an upstairs enclosure

7. Pitched Roof with Attic

* Support box also intended for use in mobile home and A-frame installations.

8. A-Frame with chimney on a steep pitch roof

* Support Box may also be used. Please consult installations instructions for more information.

NOTE ON CHIMNEY/STOVE PIPE CONNECTIONS

Diagrams on pages 14 and 15 show Ultra-Temp/Galva-Temp Chimney Systems connected to Selkirk DSP Double-Wall Stove Pipe using the Chimney Pipe Adapter. Ultra-Temp/Galva-Temp Chimneys may be connected to Single-Wall Stove Pipe using either DSA, DSAC or CPA.

Ultra-Temp Chimney is a Double Wall, Stainless Steel system protected by 1" Solid Pack Insulation. Our proprietary Solid Pack Insulation helps maintain higher flue gas temperatures for superior drafting performance and lower outside temperatures for safety. Independent OMNI testing shows Ultra-Temp Chimney is the coolest under the hottest conditions.*
